

The IoT allround solution.

**For all inventors, start-ups
and developers.**

- CE-certified IoT box
- Module can be configured and programed
- Removable case
- Built-in SIM card
- Special IoT plan for data and text messages
- Extensive online platform

There is another way.

Business

3IoT Complete.

Quite often, placing a proprietary M2M solution on the Internet seamlessly and inexpensively is not very easy for businesses, start-ups, or even developers. What usually sounds quite simple proves complicated and time-consuming later on. We say there is another way.

Everything from a single source.

Drei gives you everything you need to get started on the Internet of Things. You need not worry about single components, but have an extensive, all-in-one solution from a single source – because IoT does not need to be complicated.

3IoT Complete.

The CE-certified IoT box sits at the core of 3IoT Complete. It is well protected inside the case and looks great in any installation.

Included is a user-programmable module with multiple interfaces that already contains Internet access.

On top of that, 3IoT Complete gives you an integrated online platform that can collect and process all of the measured data and also makes them available to other systems and apps.

The built-in SIM card and an inexpensive plan tailored to the needs of an IoT box takes care of data transmission.

In short, 3IoT Complete looks after you perfectly in every respect.

Key technical data.

- Temperature and humidity sensor
- 520 mAh Li-Po battery
- RGB LED for status indicators
- Configurable button
- GSM modem with built-in SIM card
- Size (including case): 85 x 50 x 20 mm

Interfaces and inputs.

- Bluetooth 4.1 low Energy compatible
- 1 x micro-USB slave
- 2 x universal inputs: analog or digital
- 6 x GPIO
- 2 x UART
- 1 x SPI (master)
- 1 x I²C

Your benefits.

- All-in-one solution
- Easy and quick to deploy
- CE-certification
- Inexpensive IoT plan for data and text messages
- Temperature and humidity sensor
- Removable case
